SCALE FOR PROJECT CYBERSECURIT STOCKHOLM - MALWARE (/PROJECTS/CYBERSECURITY-STOCKHO MALWARE)

You should evaluate 1 student in this team

★

Git repository

```
git@vogsphere.42urduliz.com:vogsphere/intra-uuid-a06295d4-269a-
```

Introduction

Please respect the following indications:
- Be polite, courteous, respectful and constructive during the process
evaluation. The well-being of the community depends on it.
- Identifies with the person or group evaluated the possible failures of the work presented. Take the and debate
the problems you have identified.
- You must understand that not everyone understands the statements of the same
way, which means that your vision of the project or what it
requests may vary. Always keep an open mind and evaluate the way
as sincere as possible. The proper functioning of pedagogy is based on
a correct evaluation.

Guidelines

- Do not evaluate more than what is listed in the cloned git repository of the
student or group.
- Make sure that the git repository belongs to the right project,
and that it has run
"git clone" on an empty repository.
- Make sure that no aliases allow any form of cheating and that will correct
he official delivery.
- In order to avoid surprises, verify with the evaluated the
any scripts used to facilitate the evaluation.
- If, as an evaluator, you have not carried out the project you are going to evaluate,
you must read the statement completely before you begin to evaluate.
- Use the available flags to indicate an empty delivery, a
program that does not work, a cheating problem...
In these situations, the evaluation will be considered finished and the mark will be
0, or -42 if you suspect of cheating. However, except in cases of cheating,
we encourage you to continue exchanging opinions about the work
delivered, even not finished, to identify the problems that have
led to failure and avoid repeating them in the future.
- Throughout the entire evaluation, no segfault or
no program stop (unexpected, premature or uncontrolled)
In those cases, the final grade will be 0. Use the corresponding flag.
You should never have to edit any files except the
configuration, if any. In case you want to modify
a file, you must explicitly explain why you need to edit it and
agree with the evaluated student before touching any
thing.

Mandatory part

Deposit

In the deposit of the evaluated person we must have:

- A README.md file in the root. Inspect the contents quickly to see that it is not empty.
- A Makefile in the root. Inspect the contents quickly to see that it is not empty.
- The source code of the program.

With the help of the evaluator it should be possible to compile (if needed) and run the generated program.
Use the --version option to check that it runs correctly.

If there is an error, you must stop the evaluation.

Yes No

Encryption of files

Now you need to add test files to the folder to be infected by this program.
The person being evaluated must help you.

Run the program and make a comparison with an uninfected file to see that stockholm works prope
You have to check that these files are really modified and that they are not readable/usable anymor

This is the time to discuss the algorithm chosen in order to encrypt these files.
You can also discuss how to generate the key used.

You can use anything you want to validate the quality of the program. You can add files already enc

If there is an error, you must stop the evaluation.

Yes No

Decryption of files

You must now use the key generated on the previously encrypted files to reverse the process and thus have the original files usable. The program must:

- Displays a list of files that are encrypted.
- It performs the decryption and in case of error it notifies the file that cannot be decrypted.
- All exceptions are handled.

You can use anything you want to validate the quality of the program by using another key to decrypt or by adding unencrypted files with a specific extension.

If there is an error, you must stop the evaluation.

Yes No

Ratings

Don’t forget to check the flag corresponding to the defense
