SCALE FOR PROJECT CYBERSECURITY - FT_ - WEB (/PROJECTS/CYBERSECURITY-FT_O WEB)

You should evaluate 1 student in this team

★

Git repository

```
git@vogsphere.42urduliz.com:vogsphere/intra-uuid-b10ca25a-2dcd-
```

Introduction

For the smooth running of this evaluation, please respect the following rules:

- Remain polite, kind, respectful and constructive whatever happens during this conversation. It's a matter of confidence between you and the 42 community.

- Highlight the potential problems you ‘ve had with the work you're presented to the person or the group you're grading, and take the time to talk about and discuss those issues.

- Accept the fact that the exam subject or required functions might lead to different interpretations. Listen to your discussion partner's perspective with an open mind (are they right or wrong ?) and grade them as fairly as possible.
42's teaching methods can make sense only if peer-evaluation is taken seriously.

Guidelines

- You must only evaluate what you will find in the student's or group's GiT repository.

- Take the time to check that the GiT repository matches the student or group and the project.

- Double check that no malicious alias was used to mislead you and make you grade something different from the official repository content.

- If a script supposed to help evaluate the exam is supplied by either side, the other side will have to strictly check it to avoid nasty surprises.

- If the evaluating student has not yet taken this project, they will have to read the exam subject in its entirety before starting the evaluation.

- Use the flags available on this grading system to signal an empty or non-funcional project, a norm flaw, cheating, etc. In that case, evaluation stops and final grade is 0 (or -42 if it's a cheating problem). However, if it's not a cheating problem, you are invited to keep talking about the work that has been done (or not done, as a matter of fact) in order to identify the issues that lead to this stalemate and avoid it next time.

Mandatory part

Web

You must find at least the following files in the repository root:

- An index.html file with content.
- A config file nginx.conf.
- A config file sshd_config.
- A torrc configuration file. The server uses the Nginx service to deliver the web page. With the evaluator you have to find a url ended by .onion. You have to open it and check that the cont page is identical to the visible index.html file.

Yes No

TOR

The hidden service config fie contains these parameters (or an equivalence that must be explained):

- HiddenServiceDir
- HiddenServicePort

Yes No

SSH

You must be able to connect to the server with SSH.
The person being evaluated must be able to help you.

Yes No

Bonus Part

This part will only be evaluated if the mandatory part is complete.

SSH Hardening

The sshd_config contains some advanced parameters to avoid regular unprotected access.
The student must be able to explain the reasons of their config choices.

For example, password authentication is not allowed, the root user is not allowed.

Yes No

Frontend master

There is interactive web page, it reacts to the user and is remarkably beautiful..

Yes No

Ratings

Don’t forget to check the flag corresponding to the defense

Ok

Empty work Invalid compilation Cheat Crash Incor

Concerning situation Leaks Forbidden fur

Conclusion

Leave a comment on this evaluation (2048 chars max)

Finish evaluation
